

**ISSP: link with PLATO**

### Ground-based observatories

First discoveries of exoplanets in the 1990s opened up the field of exoplanet research. New innovations and discoveries continue to this day

# PLATO in a nutshell

## Prime mission goals:

- Detect a large number of extrasolar transiting planets, including **Earth-sized planets up to the habitable zone of solar-like stars;**
- Determine precise **planetary radii, masses, hence mean densities;**
- Investigate seismic activity in stars, enabling the precise characterisation of the planet-host star, including its **age.**

### Transit detection

- Planet/star radius ratio
- Inclination

### Asteroseismology

- Stellar radius, mass
- Stellar age

### Ground-based observations

- Planet mass

**Mean density**  
**Age**

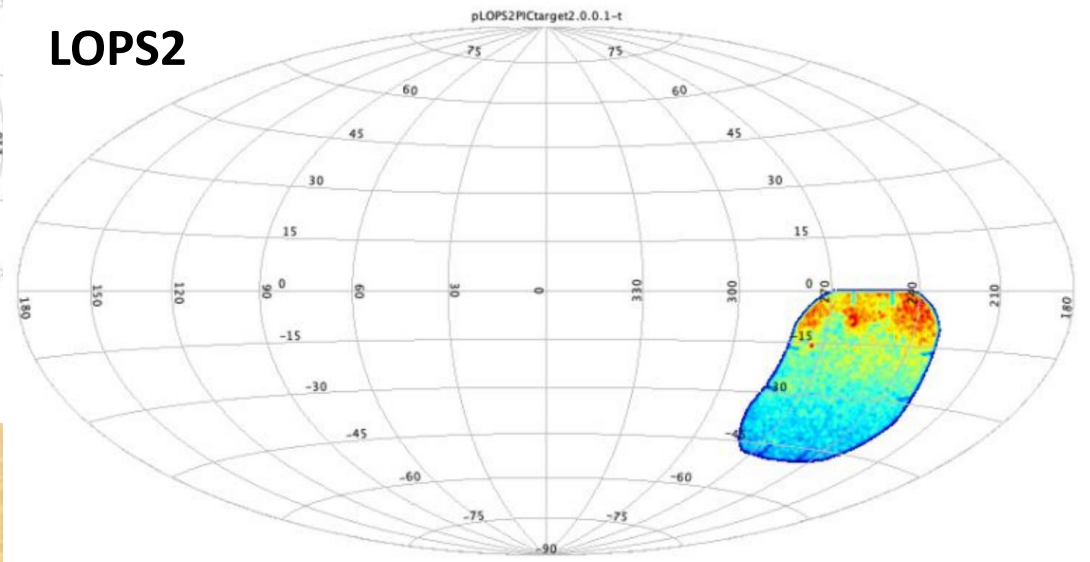

# Long-pointing fields and stellar samples

Baseline for nominal mission: 2 long pointings lasting up to 3 years each. But alternative scenarios *do* exist. Final strategy to be decided at the latest 2 years before launch due Q4 2026. Current fields: LOPN1 (North) and LOPS2 (South) each covering  $\sim 2100$  deg<sup>2</sup>.

LOPN1

LOPS2

- Bright stars ( $V < 3$ )
- Known planet hosts

## LOPN1

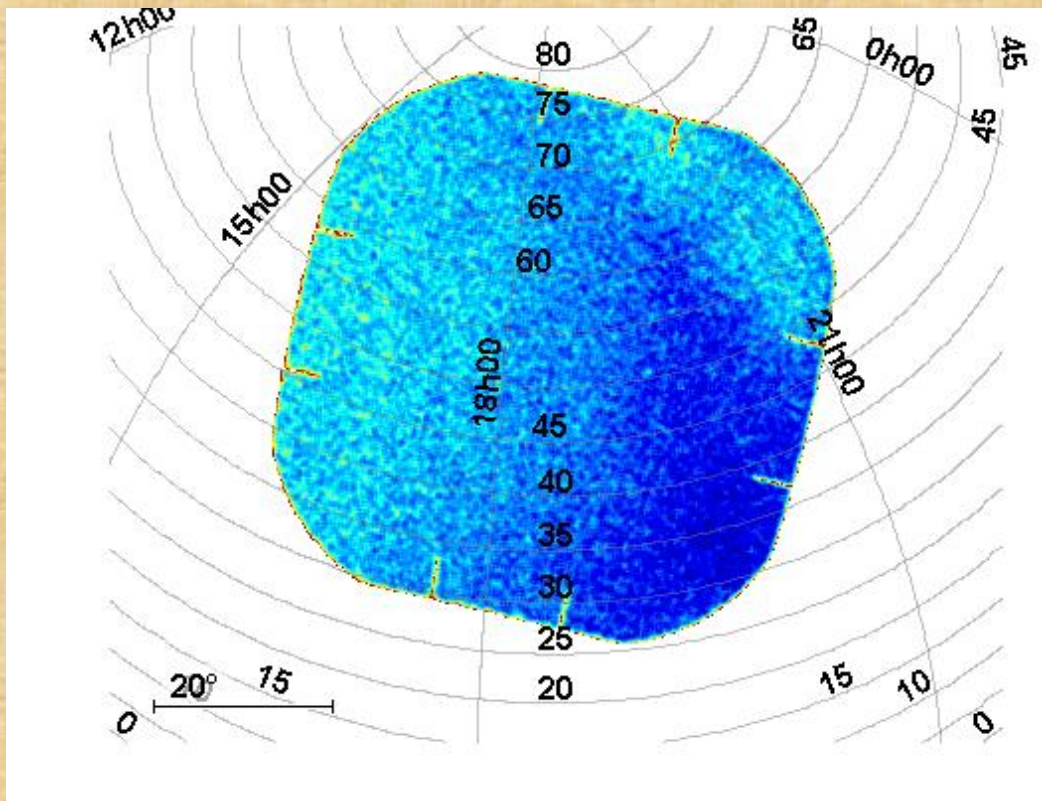

## LOPS1 (LOPS2 is $\sim 5^\circ$ more to the South!)

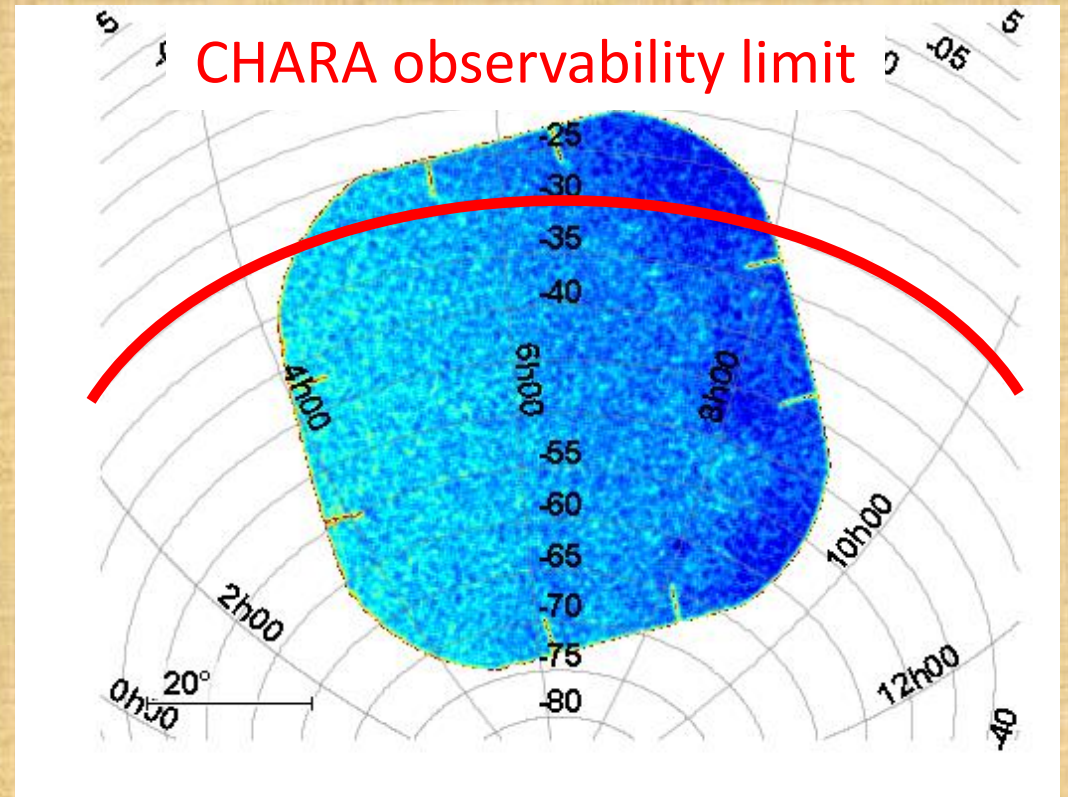

## LOPN1

## LOPS2

*Based on PIC2.0.0 data*

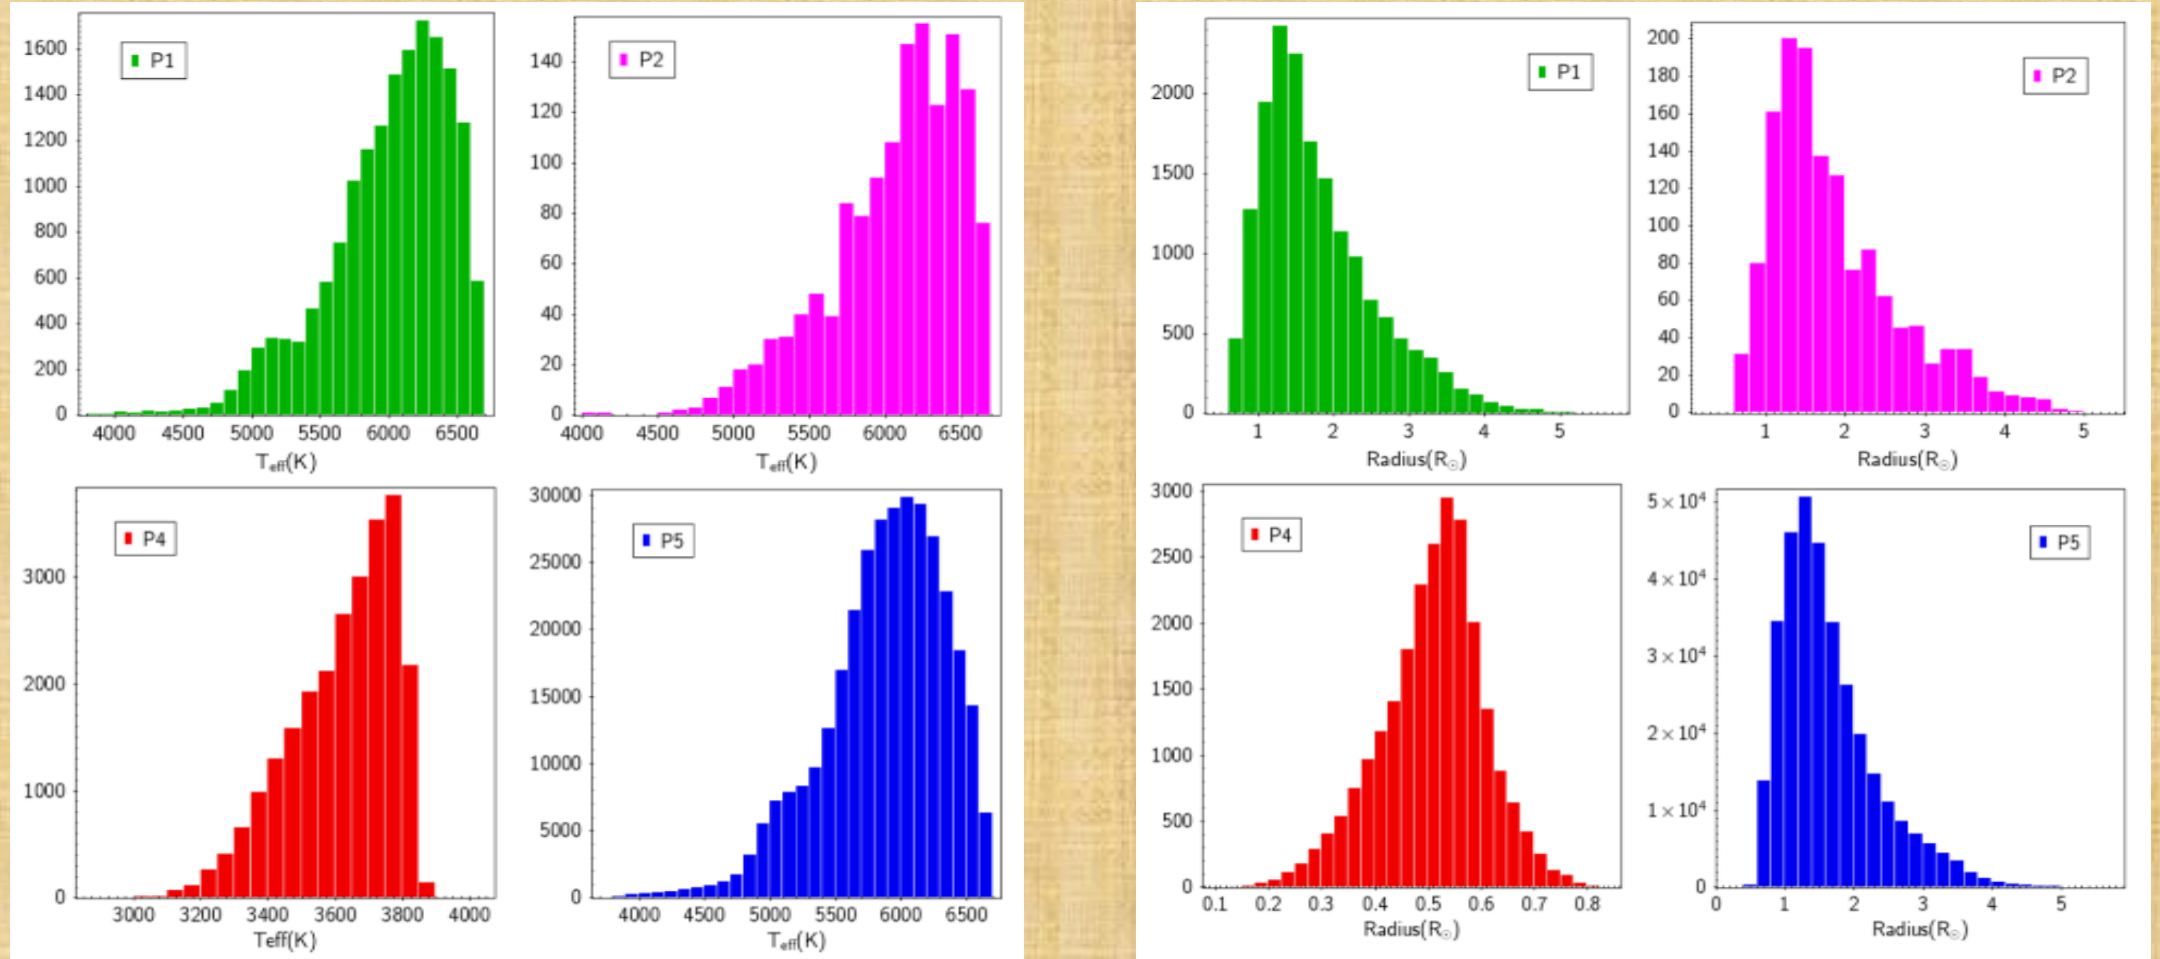

## PLATO core programme samples

	<b>P1</b> Detection of planets	<b>P2</b> Exo-planetary atmospheres	<b>P4</b> Earth-like planets in habitable zone	<b>P5</b> Statistical planet sample
<i>N</i>	> 15,000	> 1000	> 5000	> 245,000
Spectral type	F5-K7 IV-V	F5-K7 IV-V	K8-M V	F5-K7 IV-V
Magnitude	$V < 11$	$V < 8.2$	$V < 16$	$V < 13$
Seismology?	YES	YES	NO	For brightest
Interferometry				
SBCRs				

Availability of good IR photometry?

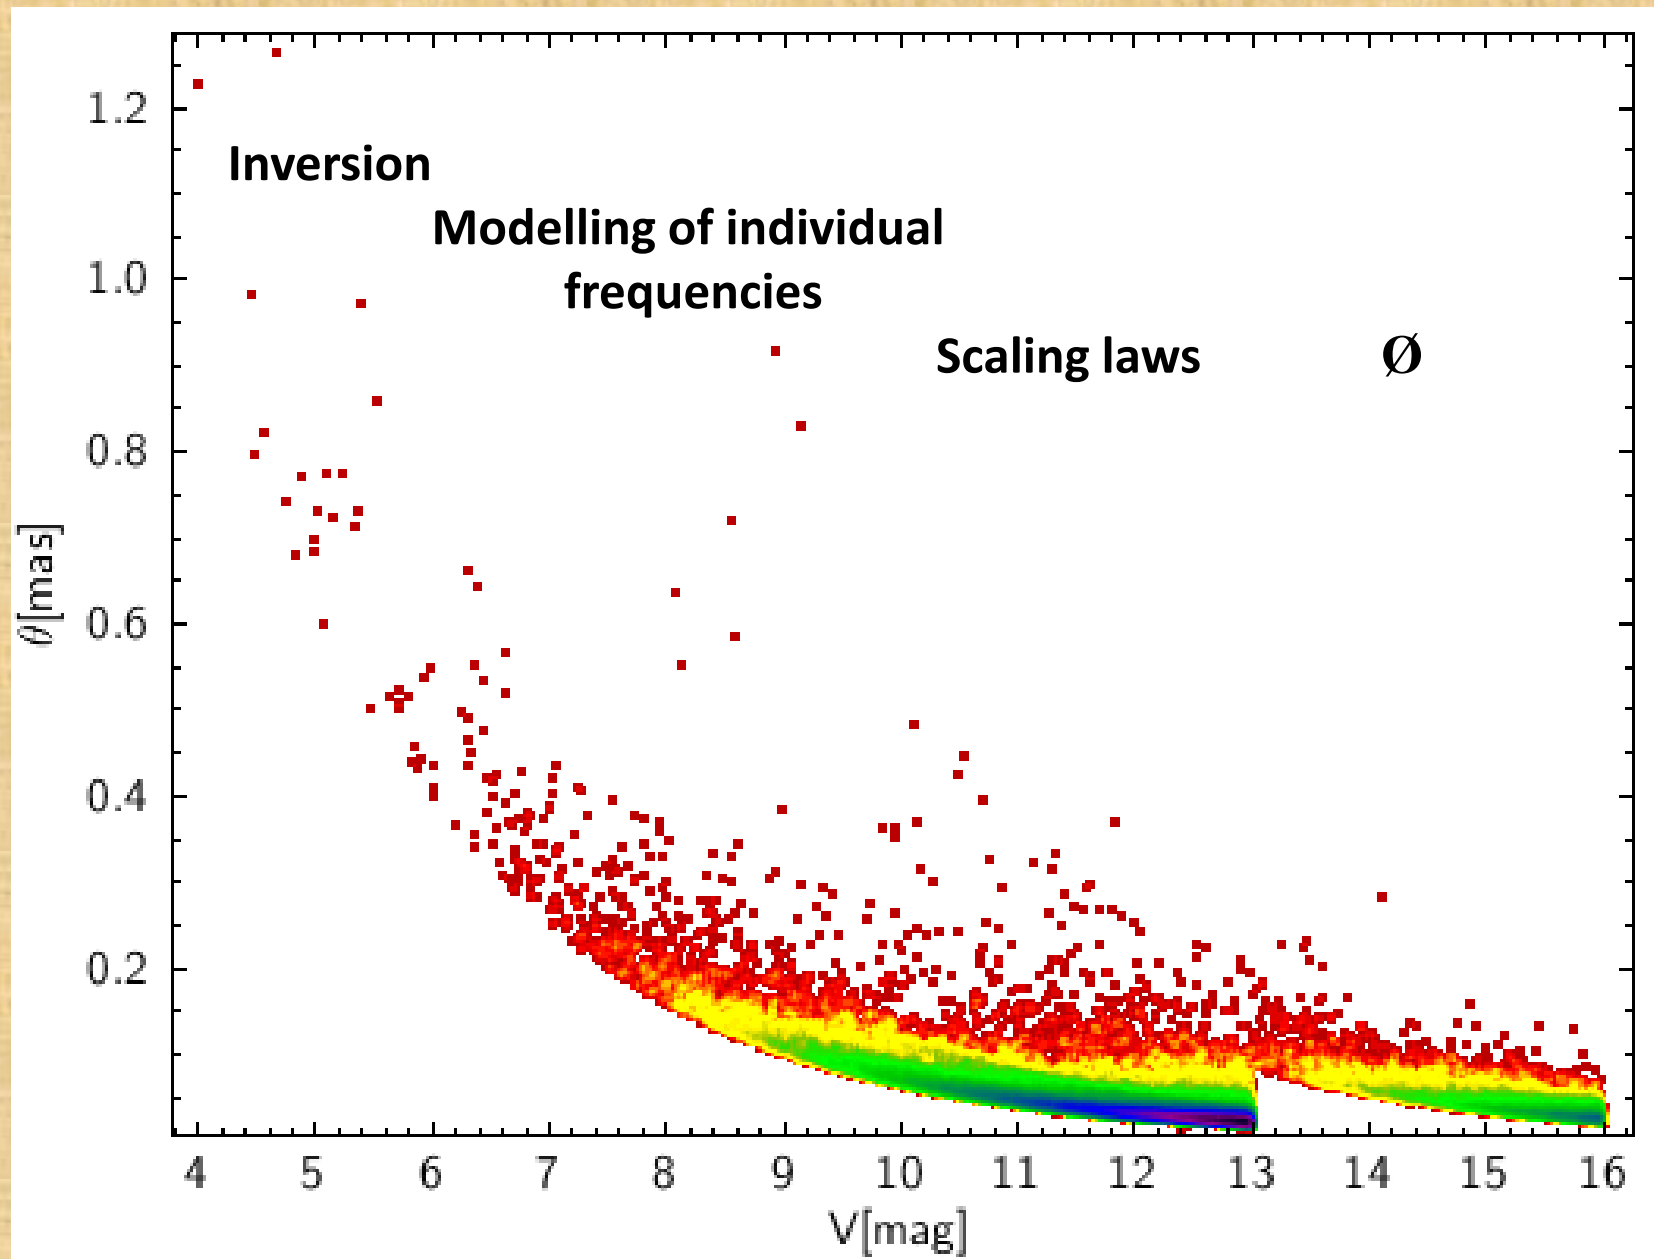

Relations fully reliable?

PLATO Input Catalogue (PIC) currently largely based on Gaia DR3 and assuming two long-pointing fields in each hemisphere.

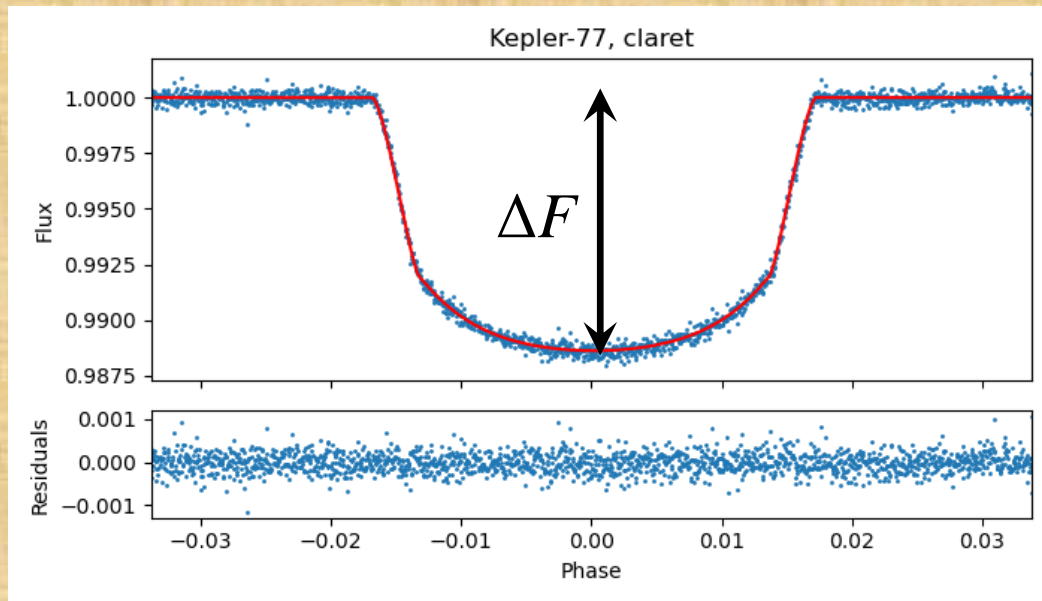

# LOPN1 - density plot

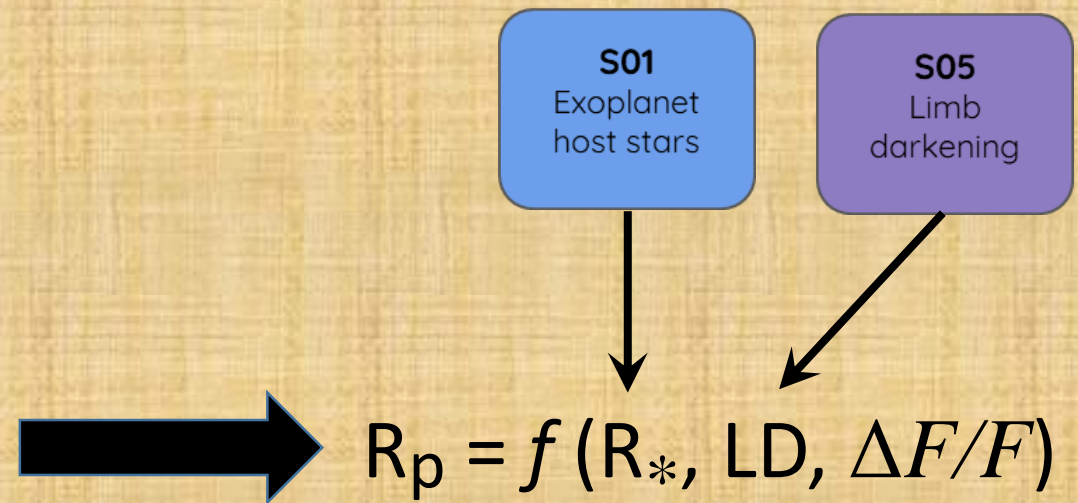

# Scientific synergy ISSP-PLATO

**R-SCI-L0-07** PLATO shall provide photometric data to determine the ratio of planetary-to-stellar radius with an accuracy of 2%, for a planet of the same size as the Earth orbiting a G0 V star of  $V=10$  (goal  $V=11$ ).

**R-SCI-L0-55** PLATO shall provide photometric data to determine the radius of a G0 V star of  $V=10$  (goal  $V=11$ ) with a precision of 1–2%.

Maxted23

**S02 - S03**  
Asteroseismic  
stars

- Interferometric follow up: improved stellar properties and constraints on physics
- Benchmarking of seismic radii
- Validation of pipeline for classical parameters (e.g.  $T_{\text{eff}}$  scale)

Silva Aguirre+13

$$T_{\text{eff}} = \left( \frac{4f_{\text{bol}}}{\sigma\theta^2} \right)^{1/4}$$

Gent+22

### S04

Surface  
Brightness  
Color  
Relation

A large fraction of the PLATO samples (P4, faint end of P5) will not have a seismic radius!

### S05

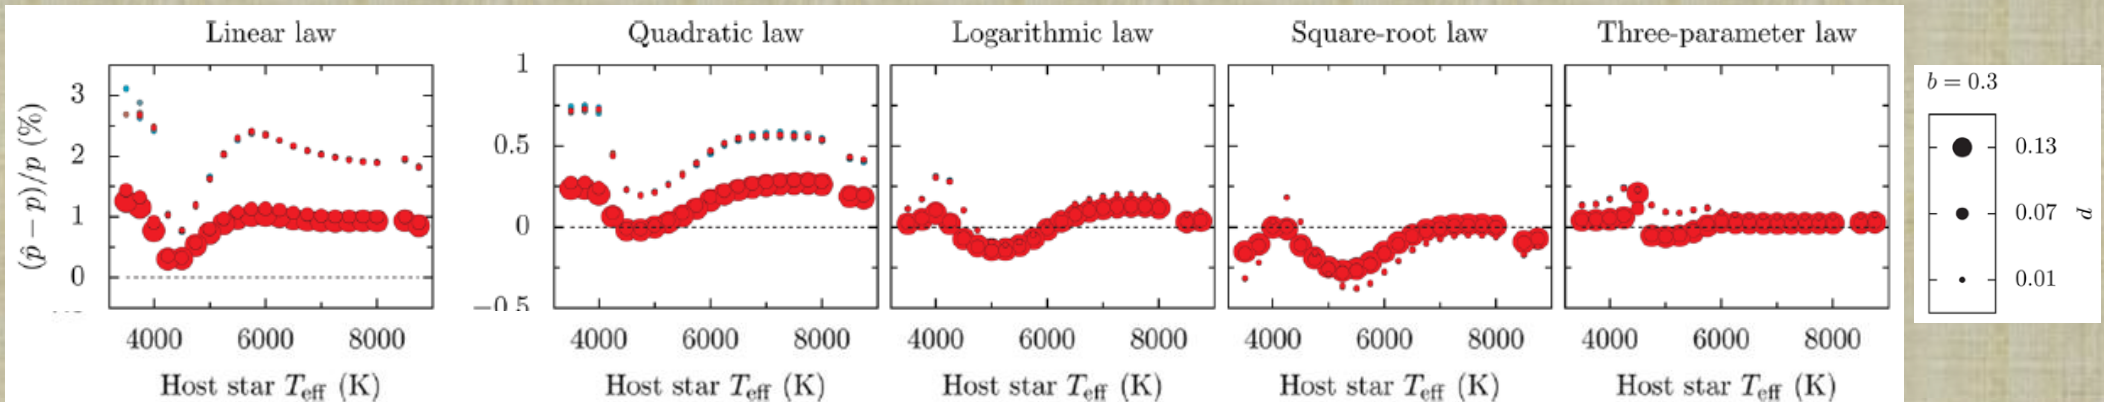

Limb  
darkening

- Direct LD estimates for brightest POIs
- Test of model atmospheres/LD laws

Hayek+12

$p = R_p/R_*$ ,  $b$ : impact parameter

Espinoza & Jordán 16

## Synergy ISSP-PLATO in practice

### WP14 (aka GOP) « Ground-based Observing Program »

#### WP145300 « Interferometry»

Lead: Denis Mourard

#### Task

Organise preparatory/follow-up interferometric observations  
+ interface with pipeline development

### WP122 « Non-seismic parameters and model atmospheres »

#### WG3 in WP122300

« Interferometry»

Lead: Denis Mourard

#### Task

Develop pipeline for treatment of interferometric data

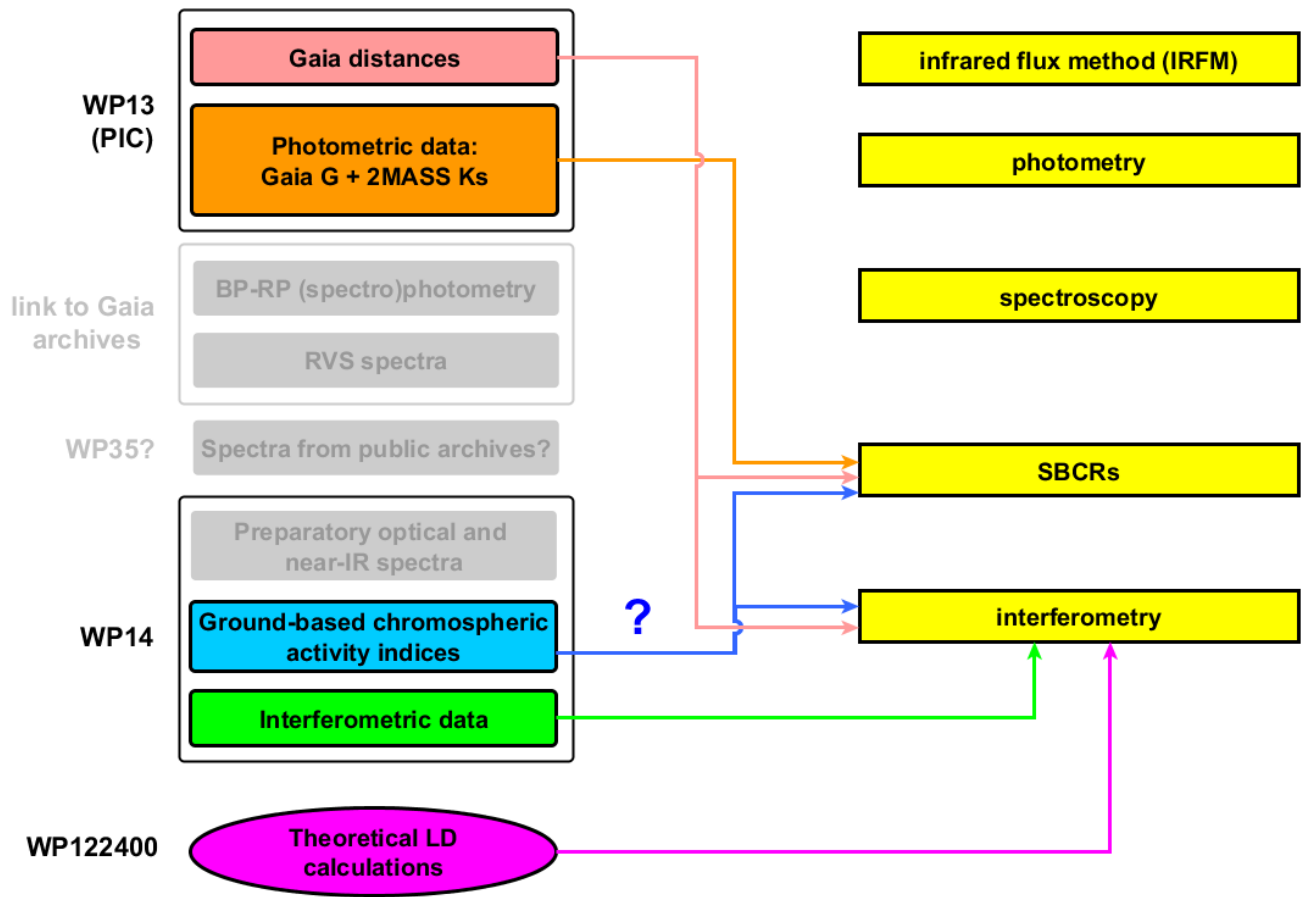

#### WG4 in WP122300

« SBCRs»

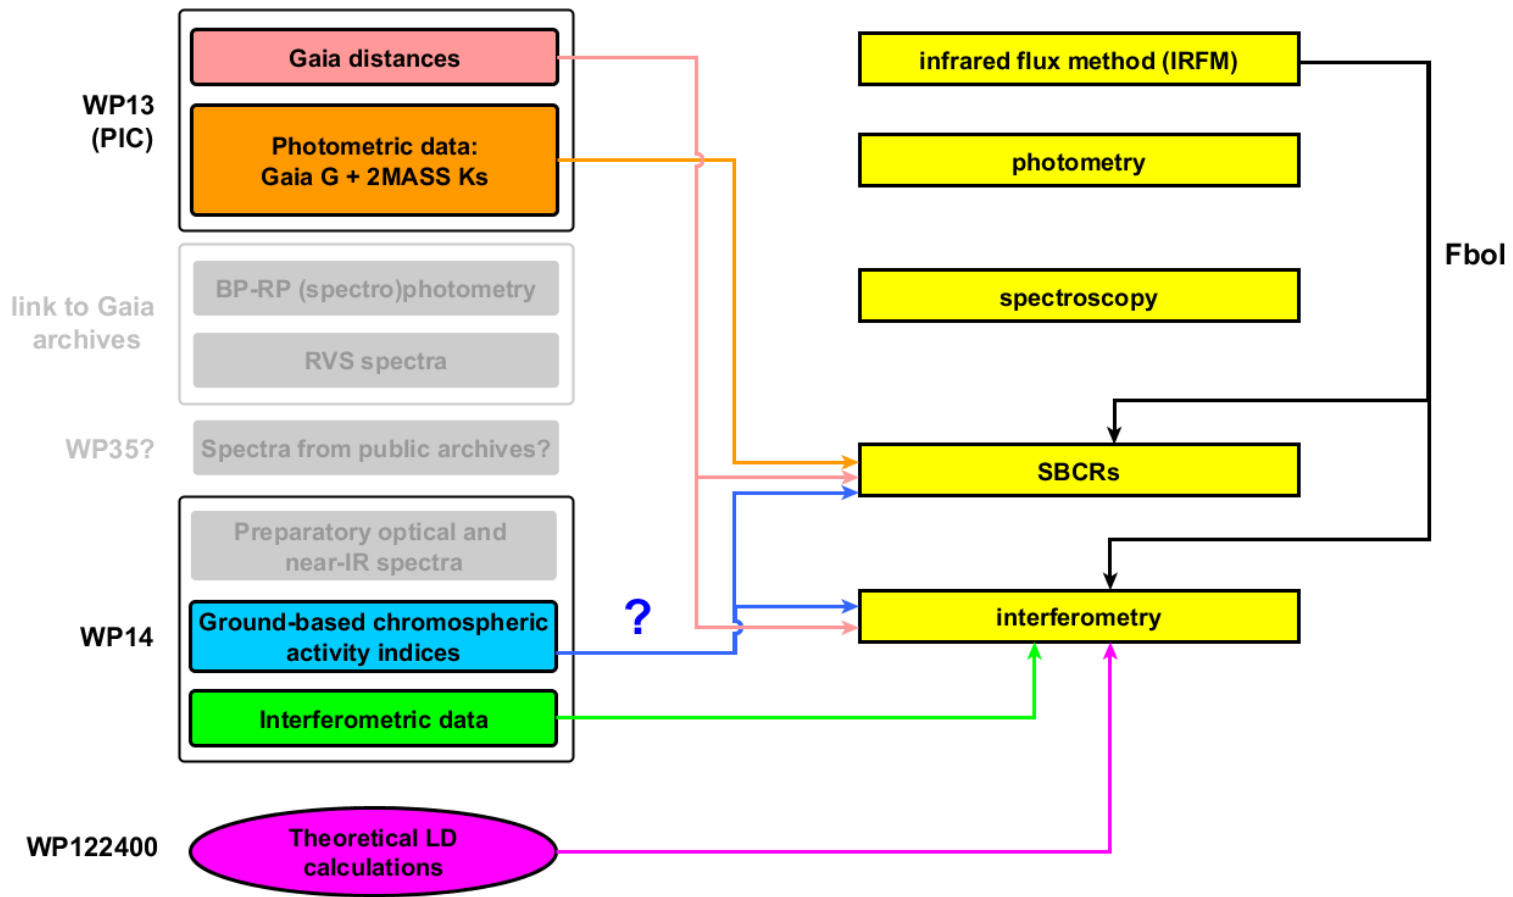

Lead: Nicolas Nardetto

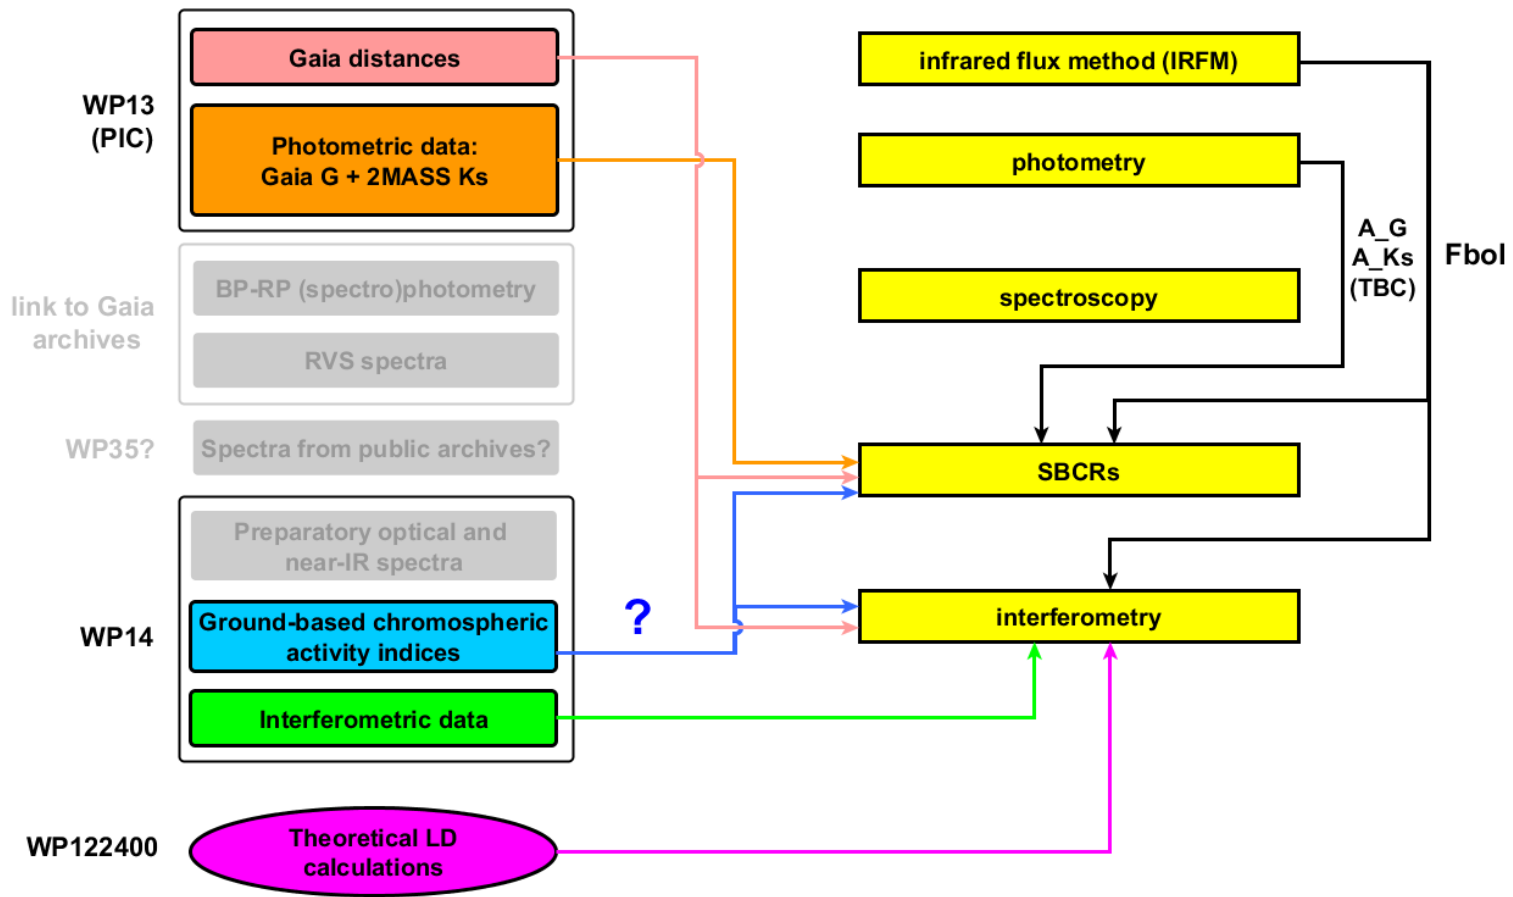

#### Task

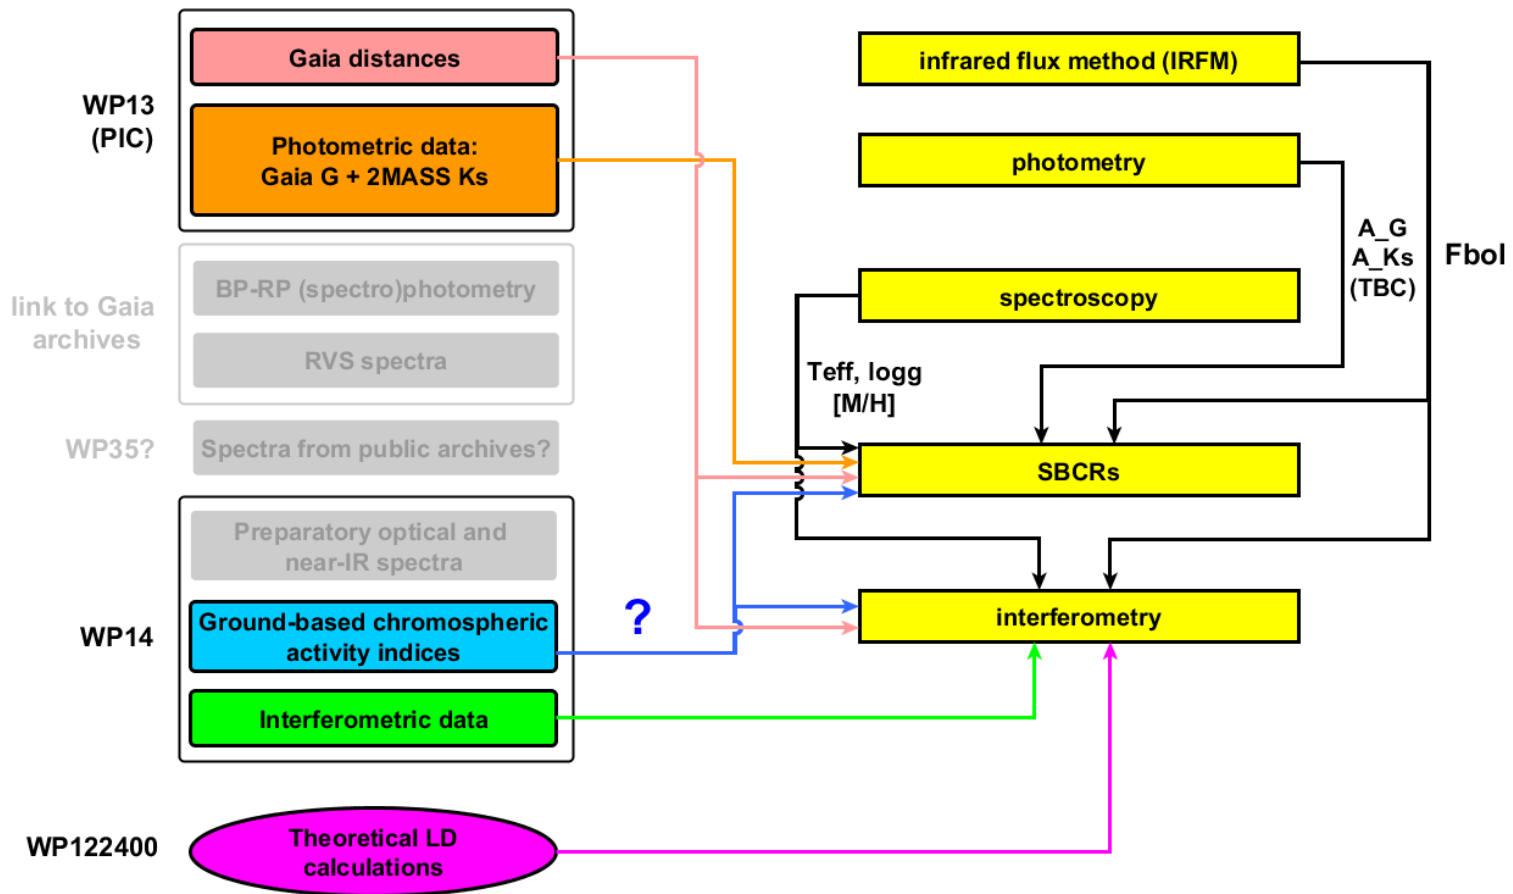

Develop pipeline for SBCRs

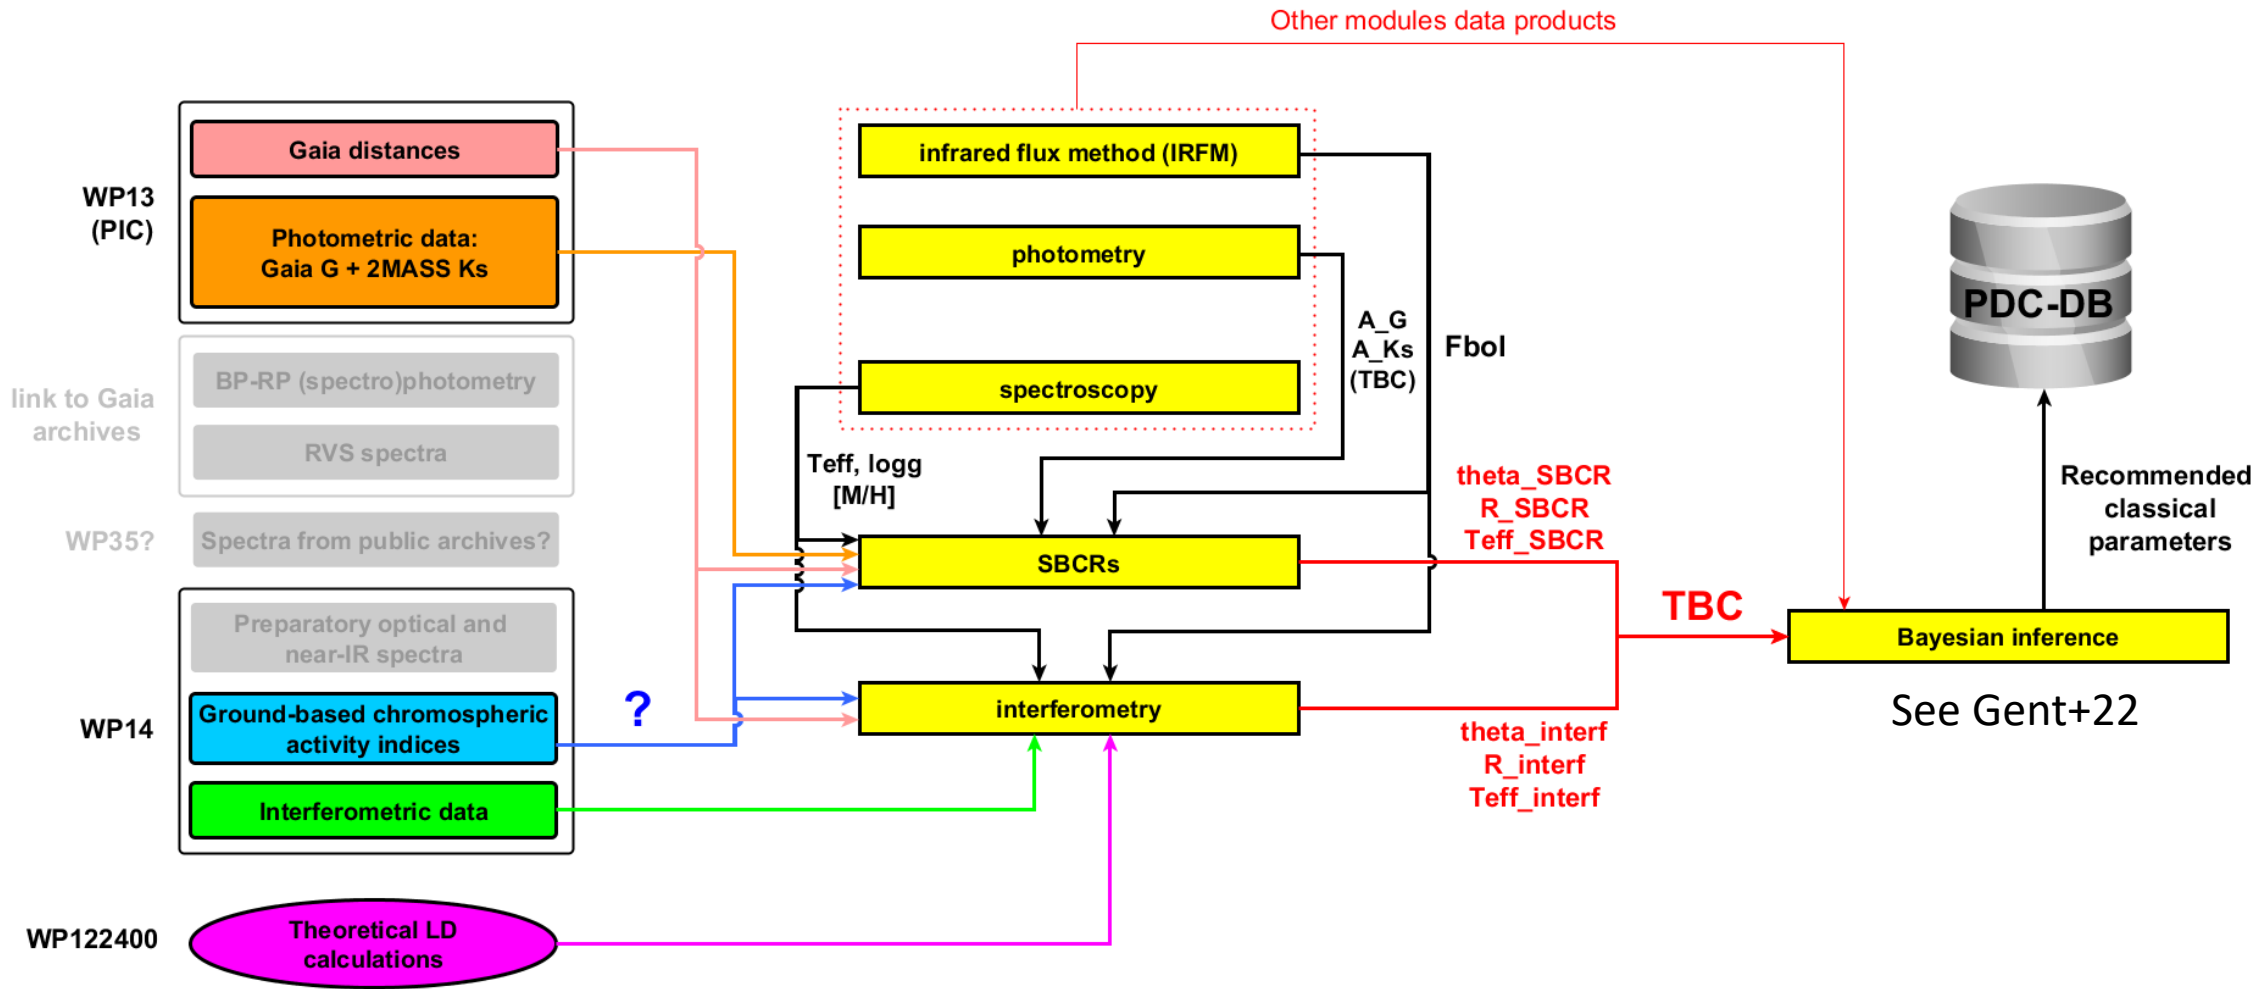

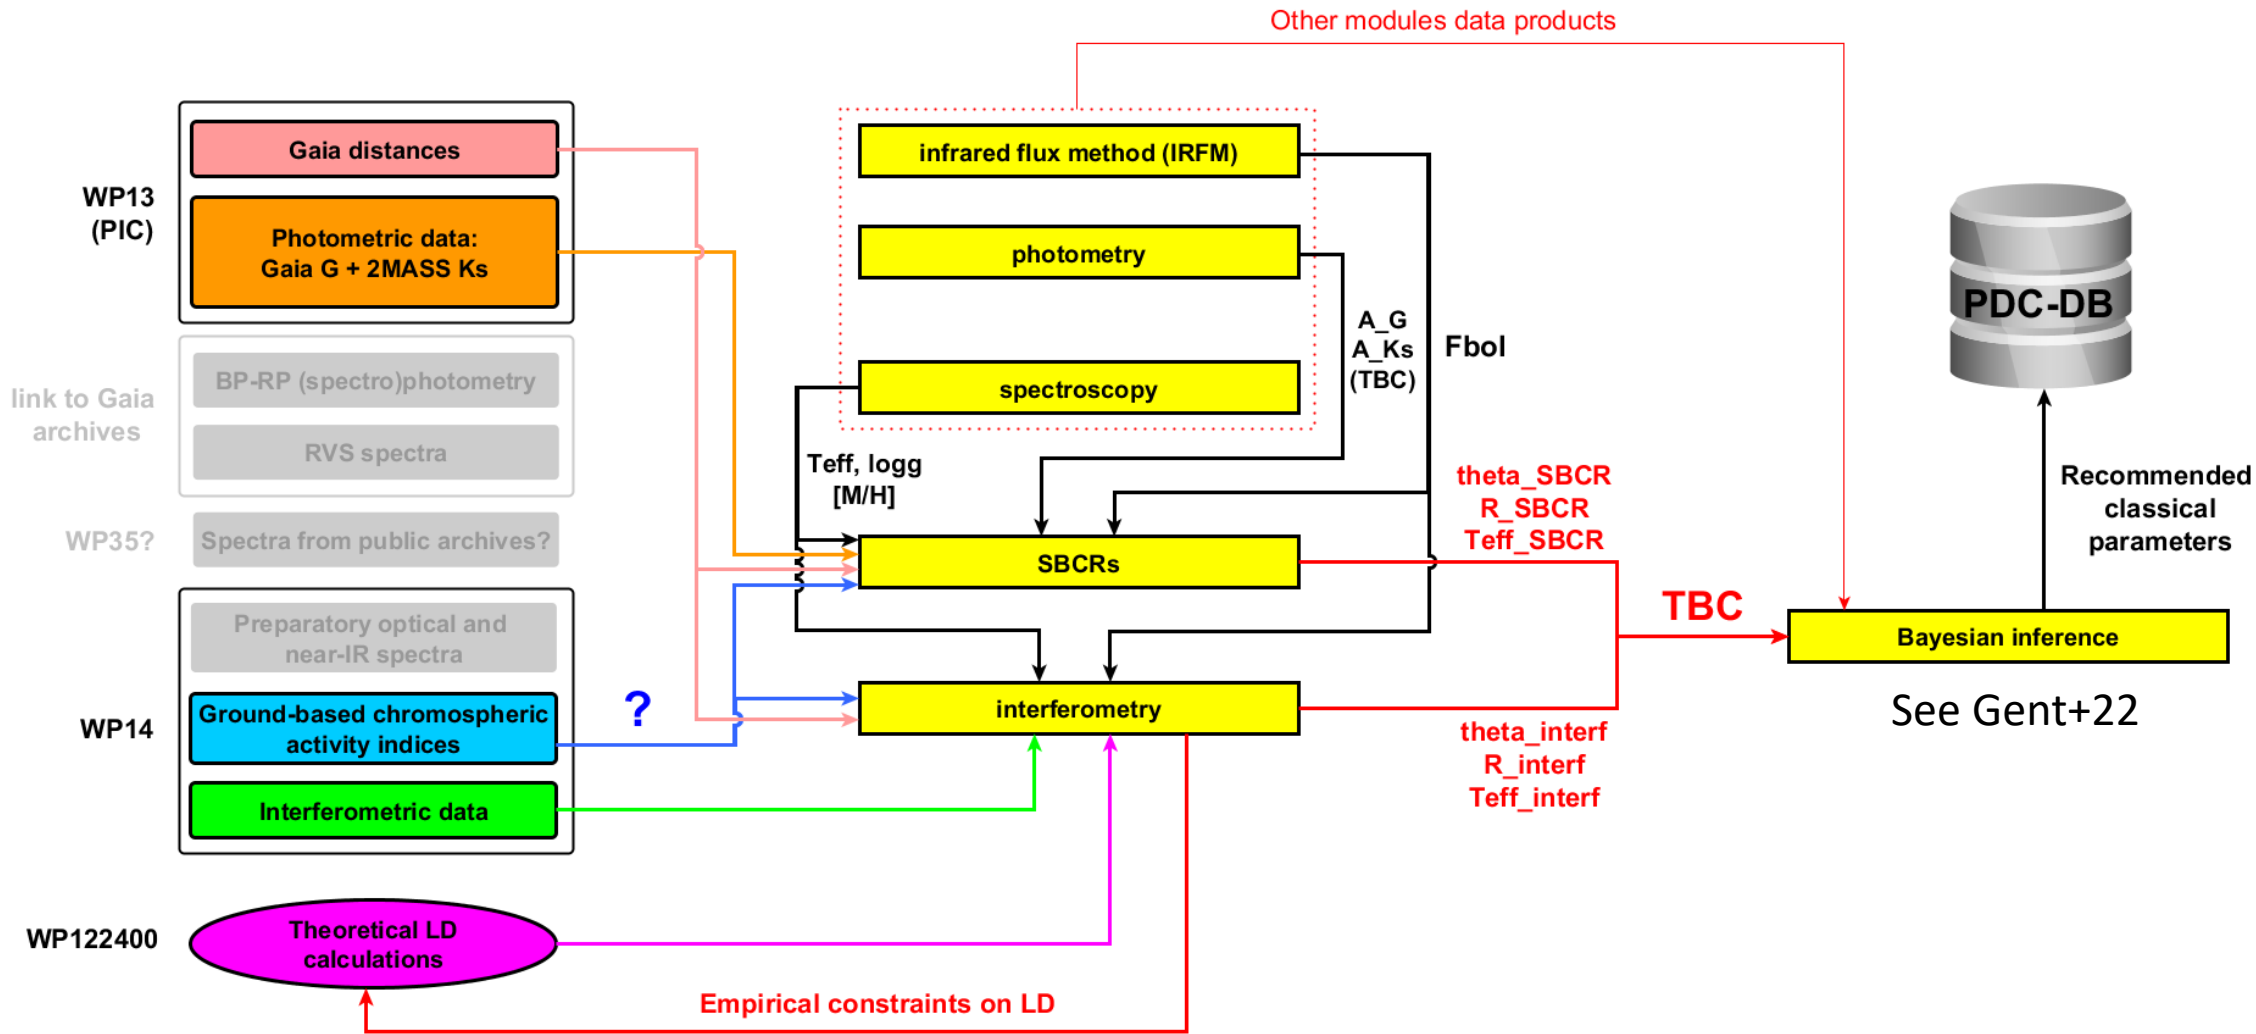

## Before launch (< Q4 2026)

- Implementation and validation of interferometric and SBCR pipeline modules into PLATO pipeline (MSteSci1 aka BO-SAPP)
- Consolidation of interface with other pipeline units: photometry, spectroscopy, ...
- Consolidation of interface between CHARA-SPICA and WP145300 dealing with gathering of interferometric observations for stars in PLATO Input Catalogue (PIC)
- Application of SBCRs to evolving versions of PIC
- Processing of CHARA-SPICA data for PIC targets
- Empirical constraints on LD (e.g. Kervella+17) to inform modellers

## After launch (> Q4 2026)

- Interferometric follow-up of POIs
- Application of improved SBCRs, if any

**Strong synergy and expertise/(wo)manpower already shared!**
